patented in US 6,323,097. The improvement comprises that the other part of the offset dependent resistor structure comprises *three substructures* that interconnect with the open terminal points of the rectangular substructures to form a single electrical pathway when the first and second parts are superimposed.

In re claim 14, the current invention is deemed to be directed to a nonobvious improvement over the invention published in US 2001/0049881 and the invention patented in US 6,323,097. The improvement comprises that the second part of the offset dependent resistor structure comprises *three substructures* that interconnect with the open terminal points of the open rectangular substructures to form a single electrical pathway.

The improvement comprises that a plurality of second nubs oriented in a second uniform direction that interconnect the first part and the second part to form a single electrical pathway, wherein the second uniform direction is perpendicular to the first uniform direction.

In re claim 22, the current invention is deemed to be directed to a nonobvious improvement over the invention published in US 2001/0049881 and the invention patented in US 6,323,097. The improvement comprises that at least the second offset dependent resistor structure includes a plurality of second nubs that interconnect the

first part and the second part of the second offset dependent resistor structure and the first and second nubs are oriented in a uniform direction.

In re claim 26, the current invention is deemed to be directed to a nonobvious improvement over the invention published in US 2001/0049881 and the invention patented in US 6,323,097. In re claim 27, the current invention is deemed to be directed to a nonobvious improvement over the invention published in US 2001/0049881 and the invention patented in US 6,323,097. The improvement comprises that the first part of the offset dependent resistor structure comprises a pair of open E-shaped substructures, each having two open terminal points and the second part of the offset dependent resistor structure comprises three substructures that interconnect with the open terminal points of the E-shaped substructures to form a single electrical pathway.

In re claim 28, the current invention is deemed to be directed to a nonobvious improvement over the invention published in US 2001/0049881 and the invention patented in US 6,323,097. The improvement comprises that the first part and the

second part of the offset dependent resistor structure interconnect via four nubs, wherein each nub is oriented in a uniform direction.
